

# CYBERSECURITY RISK ASSESSMENT

## Protecting an organization's most valuable information

More than 80 percent of public company board members report that cybersecurity is discussed at most or all boardroom meetings. At the same time, a surprising 66 percent of them are not fully confident their companies are properly secured against cyberattacks.<sup>1</sup>

In today's global, digital world, data rules the business. As a result, organizations must be aware of their individual risk, as well how risk impacts business performance and strategy. Cybersecurity has clearly become an important board-level priority, with companies taking a closer look at how information is managed and protected. A Cyber Risk Assessment can help companies identify and mitigate potentially damaging risks and impacts to their organization with a remediation roadmap and recommendations for reducing cyber risk.

### StrataCore's Approach

StrataCore's cybersecurity sourcing methodologies and tools are adapted to suit your environment and business objectives. A Cyber Risk Assessment will help you align your cybersecurity activities with your business requirements, risk tolerances and resources. Our consultative approach provides a mechanism that enables you to view and understand the characteristics of your strategy to manage cybersecurity risk.

Our cybersecurity consulting partners employ tested techniques and best practices to:

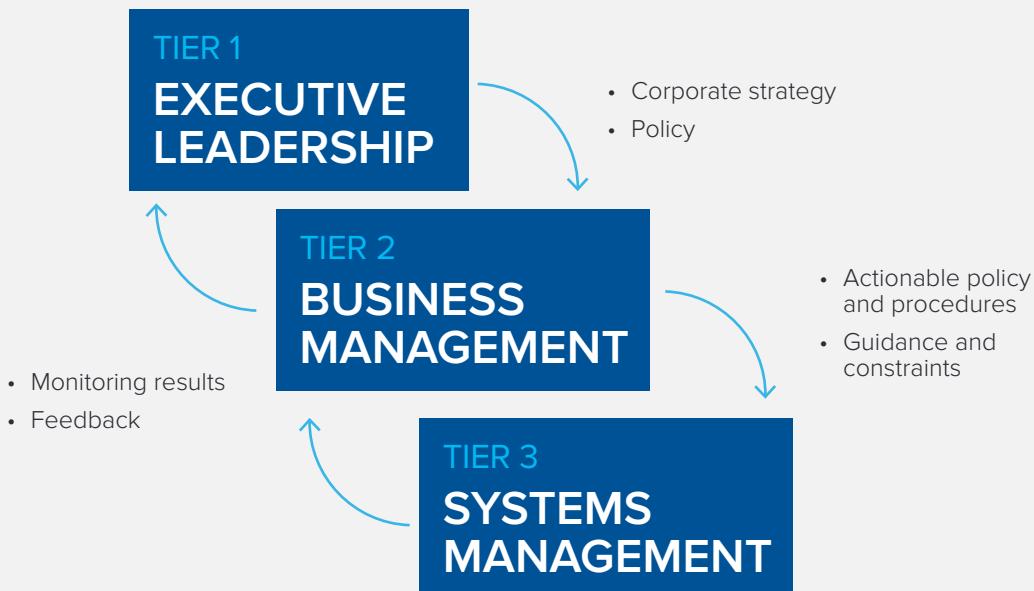

- Effectively identify, analyze and monitor information-related vulnerabilities
- Help you determine methods to manage or resolve data security risks
- Spot potential data privacy and security compliance issues
- Prioritize remediation steps in an effective plan based on your company's specific goals, budgets and timelines

1. Results from 2015 survey of 200 public company board members. Survey conducted by Veracode and the New York Stock Exchange Governance Services.

### Better Business Decisions for Security and Compliance

Risk assessment findings are prioritized and rated based on their risk and probability of exploitation, and the potential business impact. A heat map shows exactly what people, processes and technologies are most at risk so you can focus your efforts on addressing the issues that matter the most.

Cyber Risk Framework	1	IDENTIFY
	2	PROTECT
	3	DETECT
	4	RESPOND
	5	RECOVER

## The StrataCore Difference

## Knowledge of your technology tools

The StrataCore team has many years of IT sourcing experience, giving us a deep understanding of technology tools and service providers.

## A better framework for governance

We ensure risk assessments meet the unique needs of each client's business goals and industry challenges. By providing sourcing expertise on everything from risk advisory and compliance assessment, to technical testing and monitoring, we can help your company create a cyber risk strategy that strengthens your ability to absorb and react to emerging threats while meeting regulatory compliance mandates.

## A non-biased approach

We have a vendor-neutral approach to help you source the right IT solution. This allows us to stay objective when we provide comprehensive, integrated and business centric recommendations that help improve the effectiveness, efficiency and agility of your cyber risk management and compliance strategies.
